HOUSEHOLD EXPENDITURE SURVEY 1974-75

Bulletin 4

EXPENDITURE CLASSIFIED BY INCOME OF HOUSEHOLD

Australian Bureau of Statistics Canberra, Australia

Reference No. 17.24

INQUIRIES

If you want to know more about these statistics ring Peter Gardner on Canberra 525609 or our State office or write to Information Services, Australian Bureau of Statistics, P.O. Box 10, Belconnen, A.C.T. 2616.

PREFACE

This is one in a series of 8 publications relating to the 1974-75 Household Expenditure Survey. It contains estimates of household expenditure for some 100 separate commodity groups, classified by income of household. Estimates are shown for each capital city and for all capital cities combined.

First results of the survey were presented in summary form in Bulletin No. 2 : Preliminary Results, which was published in July 1976. Some of these figures are revised in this bulletin.

For details of the other publications in the series see page 28.

This has been the first major survey of this kind to be undertaken by the Australian Bureau of Statistics. It was designed to find out how the expenditure pattern of private households varies according to income level and other characteristics such as size and composition of the household, age and occupational status of the household head. Information of this kind had been sought for a wide range of policy and research purposes.

While this first survey was confined to capital cities, a second survey has been conducted in respect of the year 1975-76 and covers non-metropolitan areas also.

Special thanks go to the sample of households whose co-operation and high degree of response was vital to the success of the survey.

R. J. CAMERON

EXPLANATORY NOTES ¹

Scope and coverage

The estimates contained in this bulletin are based on a sample of private dwellings selected in the six State capital cities and Canberra². Private dwellings included houses, home units, flats, caravans, and any other structures being used as private places of residence. Hotels, boarding houses, institutions, etc., were defined as special dwellings outside the scope of the survey.

2. The basic survey unit was the household (see paragraph 8). Information was collected on a household basis, rather than for selected individuals in the population, because many items of expenditure relate to the household as a unit. These include shared expenditure on items such as food, accommodation and household goods and appliances. The following categories of households (or persons) were excluded from the survey:

- (a) foreign diplomats and their staff;
- (b) foreign servicemen and their families stationed in Australia;
- (c) persons from overseas countries touring or holidaying in Australia;
- (d) visitors staying with the household for less than four weeks after the initial interview;
- (e) usual residents absent at the time of the initial interview and not returning within 7 days; and
- (f) usual residents who were going away within 7 days of the initial interview and not returning before the end of the two-week diary keeping period.

Children under 15 years of age who were away at boarding school or away for less than four weeks were included as members of a household.

3. The estimates are based on the complete range of data supplied by 9,095 of the 12,600 households selected for the survey. The difference is accounted for by households which could not be contacted; were unable to fully participate; or were otherwise non-respondent. The estimation procedure was designed to represent such households by using data for responding households which were judged to be similar for certain characteristics.

Collection method

4. Personal interviews by trained interviewers were used to collect information on expenditure items which occur infrequently (e.g. purchase of vehicles and property, and the payment of household bills such as electricity and gas) and to collect details of income. In addition, all household members aged 15 years and over were asked to record all payments made over a two-week period in a diary provided to each of them. Consequently each household was involved in the survey for two weeks, although the sample of households was spread evenly over the 12-month survey period.

Definitions

5. *Expenditure* was defined as all payments for goods and services for private use, made by all members of the selected household aged 15 years and over. In general, expenditure was collected on the basis of payments made during the reference period rather than on the basis of goods and services 'acquired' or 'consumed' during the period.

6. *Income* was defined as gross income from all sources before taxation and other deductions were made, and was collected from all members of the selected household aged 15 years and over. The main components of income are:

- (a) wages and salaries (including income-in-kind received from an employer);
- (b) income derived from self-employment (including wages and income-in-kind taken from the business);
- (c) government social service benefits;
- (d) income from investments (including interest, dividends, royalties and rent); and
- (e) other regular income (including educational grants and scholarships received in cash, benefits received from an overseas government, income received for professional advice outside the normal job situation, superannuation, worker's compensation, alimony or maintenance, and any other allowances regularly received).

¹ For a detailed explanation of the concepts, methodology and procedures used in the 1974-75 Household Expenditure Survey, see Bulletin 1 *An Outline of Concepts, Methodology and Procedures*.

² Dwellings for Darwin were selected in the original sample. However, cyclone Tracy in December 1974 caused the suspension of operations in Darwin and no estimates for Darwin are included in this bulletin.

7. Although information about most types of income was obtained on a current basis, some data, principally incomes from investment and from self-employment, were obtained in respect of the previous twelve months or financial year.

8. *A Household* was defined as a group of people, who live together as a single unit in the sense that they have common housekeeping arrangements; that is, they have some common provision for food and other essentials of living. A person, or persons, living in the same dwelling but having separate catering arrangements, constituted a separate household.

9. *The Head of a household* was taken to be that person nominated by the member(s) of the household as the 'head'. This person was usually the male 'breadwinner'.

10. *Workers* are those persons aged 15 years and over who reported any 'earned' income (i.e. income from self-employment or from part-time or full-time wage and salary employment). In general, persons who were asked to report 'earned' income were those who worked in a job or business, or received income from a job or business, at any time during the four weeks prior to the week of interview.

11. *Retired persons* are those persons who reported no 'earned' income and who described themselves as being retired (e.g. having retired from work for reasons of age or sickness).

Interpretation of results

12. Since the estimates are based on a sample, they may differ from the figures that would have been obtained from a collection based on the whole population using the same questionnaires and procedures. These differences are called sampling errors. One measure of the sampling error of an estimate is the standard error percent (i.e. the standard error expressed as a percentage of the estimate). The size of the standard error percent of an estimate depends on:

- (a) the size of the sample on which the estimate is based (the smaller the sample, the larger is the standard error percent);
- (b) the variability in frequency of reporting and in the size of the reported values (e.g. expenditure on household appliances would be more variable and hence have a higher standard error percent than expenditure on meat).

Care should be exercised in the use of the figures in this bulletin, especially for the smaller cities (where sample sizes are smaller) and for those expenditure items subject to large variability. In particular some of the items relating to expenditure on clothing and footwear, household equipment and operation (notably in floor coverings), recreation and education, and 'other payments' (notably in gambling and in capital housing costs) may be subject to large sampling errors. As a result, some estimates of expenditure on particular items appear unusual when compared with expenditure on the same items by households in different income groups, and when compared with households in the same income group in other capital cities. Some of the more obvious cases of this have been footnoted in the tables. Details of standard errors associated with the figures in this bulletin are not yet available for publication although some advice can be given on application to the Central Office of the ABS. Bulletin No. 3, *Standard Errors* will provide a guide to the standard errors of estimates in this and other bulletins in the series.

13. In addition to sampling errors, the estimates are subject to the following types of non-sampling errors:

- (a) errors in reporting (e.g. because some answers were based on memory, or because of misunderstanding or unwillingness of the respondent to reveal all details);
- (b) biases caused by differences which may have existed in the characteristics and patterns of expenditure and income between respondent and non-respondent households within the scope of the survey;
- (c) errors arising during processing (e.g. coding, data recording). In particular, the detailed statistics in this bulletin are more susceptible to errors arising from the incorrect classification of individual payments to expenditure categories than are the more broadly classified statistics in Bulletin 2.

Considerable effort was made to minimise these types of errors by careful questionnaire design, intensive training and supervision of interviewers, asking respondents to refer to records wherever possible, and extensive editing and quality control checking at all stages of data processing. In an attempt to minimise biases caused by non-response, adjustments were made to the weights¹ allocated to respondent households having certain characteristics, in an attempt to take account of the number of non-respondent households with the same characteristics.

¹ The factors used to expand the sample data to obtain population estimates.

14. When comparing the estimates of expenditure in this bulletin with estimates based on other statistics such as production, sales and excise data, it seems that expenditure on certain items, particularly alcohol and tobacco, is understated. This would be in line with experience in other countries which have carried out similar surveys. However, it is not possible to make precise comparisons because of differences in scope between this survey and other statistical data.

15. Because of the extended collection period of the survey, changes in money values and changes in the relative prices of goods and services have some implications for the interpretation of the results. The time reference periods of data items differed, first, because households were approached at different points of time during the 12 months duration of the survey and, secondly, because data items were obtained in respect of varying time reference periods (e.g. medical expenses in respect of the previous 3 months, purchase of motor vehicles in the previous 12 months). These factors may have caused some data distortion and complicate the interpretation of results for certain purposes. For example, two households with similar characteristics, one selected towards the beginning of the survey period and the other towards the end, may have been classified into different income groups solely because of changes in wage levels between the two

collection dates. In a sense, therefore, all classifications and data items are based on average prices or incomes prevailing over the period to which the collected data related.

16. When comparing income and expenditure patterns between cities account should be taken of the differences which may exist in the characteristics of the populations being compared, including: average numbers of persons per household, average number of persons in the household working, average number of retired persons, age distribution, and distribution of employees between occupations and industries.

17. It can be seen from Table 4.1 that average expenditure exceeded average income in the lowest income range while in the higher income ranges average income substantially exceeded average expenditure. For the medium and higher income ranges, income tax payments are a large part of the difference between income and expenditure as defined. Income tax is included in 'other payments.' Some of the other items in 'other payments' are conventional forms of personal saving while others involve the purchase of assets. If 'other payments' are added to 'total expenditure' there is a closer correspondence overall between income and outlay, as shown in the table below.

AVERAGE WEEKLY HOUSEHOLD EXPENDITURE AS A PERCENTAGE OF
AVERAGE WEEKLY HOUSEHOLD INCOME, 1974-75
(per cent)

	Weekly household income						All households
	Under \$80	\$80 and under \$140	\$140 and under \$200	\$200 and under \$260	\$260 and under \$340	\$340 or more	
'Expenditure' as a percentage of 'income'	130.3	99.7	85.2	74.4	69.2	61.9	76.2
'Expenditure' plus 'other payments' as a percentage of 'income'	130.8	117.5	103.9	94.3	89.5	84.9	96.0

18. Some households will have financed the purchase of some items in 'expenditure' and 'other payments' from savings and from other sources such as loans, receipt of maturing insurance policies, gifts, windfall gains, and profits from the sale of assets, which are not included in income as defined for the survey.

19. There is a further complexity in attempting to compare average income and expenditure, in that it was not possible to collect all the information in respect of a common period of time. For example, although most of the income information was obtained on a current basis, income from investment and self-employment related to the previous twelve months or financial year.

20. In interpreting relationships between income and expenditure it should be borne in mind that the increase in household income was associated, amongst other things, with an increase in the number of persons working per household, from an average of 0.18 workers in the under \$80 income group to an average of 2.56 in the \$340 or more income group. The average number of persons per household showed a corresponding increase from 1.71 to 4.06.

For footnotes see page 27

FOOTNOTES AND SYMBOLS

- (a) The sum of all payments for goods and services made by household members aged 15 years and over. *See* paragraph 8 for definition of a household.
- (b) The sum of the gross weekly incomes of household members aged 15 years and over. *See* paragraphs 6 and 7 for definition of income.
- (c) Sydney, Melbourne, Brisbane, Adelaide, Perth, Hobart, Canberra.
- (d) The standard errors on the estimated number of households vary according to the nature of housing occupancy, being largest in the categories 'Rented Unfurnished Government' and 'Rent Free' (both about 6% for all households). Standard errors on estimates for individual income groups (table 4.1) and for each capital city (table 4.9) range between about 10% and 20% for the 'Rented Unfurnished Government' category and between about 10% and 30% for the 'Rent Free' category. Generally, the standard error percents are largest where the estimates are smallest (i.e. for the higher income ranges and the smaller capital cities). Despite the relatively high standard errors on these figures, the estimates are shown in order to indicate the approximate relative importance of these categories.
- (A) Item numbers refer to expenditure ('commodity or service') groups. Details of the individual items which comprise expenditure groups are given in Appendix 1 of Bulletin 1.
- (B) Households providing the full range of information sought. Data provided by sample households were expanded to produce estimates relating to all households represented by the survey.
- (C) *See* paragraph 2 for criteria used in determining whether or not individual persons are included as members of a household.
- (D) *See* paragraph 10.
- (E) *See* paragraph 11.
- (F) *See* paragraph 9. Age was recorded in number of years.
- (G) Household income is the sum of the gross weekly incomes of household members aged 15 years and over. *See* paragraphs 6 and 7 for definition of income.
- (H) Included in 'current housing costs' are both the principal and interest components of any housing loan repayments. Excluded are outright purchase of, or deposit on, dwellings or land, and other payments of a capital nature, which are included in 'Other payments'.
- (I) Does not include the item 'Other payments'.
- (J) Included are payments such as income tax, superannuation contributions, life insurance premiums, purchases of and deposits on dwellings and land, and gambling payments. Receipts from sales of dwellings and land, and gambling winnings, are offset against payments. As a result 'Other payments' *sometimes* appears as a negative value.
- (K) Includes dwellings rented from bodies such as government housing authorities and the housing section of the Department of the Capital Territory and the Department of Northern Territory. Dwellings rented to employees by government bodies such as Departments of Army, Education, Railways, and by municipal councils are excluded (these are included in 'other landlord').
- (L) Average weekly expenditure on 'current housing costs' of those households in each occupancy group.
- (M) Net of sales, and insurance claims where items are 'written off'
- (N) Radio and T.V. licences were discontinued in August 1974.
- (P) The total amount of personal income tax (less any refunds) paid in the last financial year by household members aged 15 years and over.
- (Q) Estimates of expenditure on health services are net of any refund received or expected to be received.

* This figure reflects the effect of some unusual instances of expenditure in a relatively small sample.

† Information not shown because the figures are subject to sampling variability too high for most practical purposes.

.. No expenditure recorded.

0.00 Average expenditure of less than ½ cent.

N.E.C. Not elsewhere classified

1974-75 HOUSEHOLD EXPENDITURE SURVEY PUBLICATIONS

The results of the 1974-75 Household Expenditure Survey will be issued progressively in a series of eight bulletins. The bulletins (listed below) may be purchased through the mail from Mail Order Sales, Australian Government Publishing Service, P.O. Box 84, Canberra, A.C.T. 2600; over the counter from the Government Publications and Inquiry Centres in each State capital; and through the mail or over the counter from offices of the Australian Bureau of Statistics in each State capital.

The title and reference number of each publication is shown below, followed by its price, the price including postage, and a brief summary of contents.

BULLETIN 1 AN OUTLINE OF CONCEPTS, METHODOLOGY AND PROCEDURES (Ref. No. 17.19)(\$1.20,\$1.60)

Provides a detailed description of survey objectives, scope and coverage, concepts and definitions used and sample design and methodology.

BULLETIN 2 PRELIMINARY RESULTS (Ref. No. 17.20)(70c, \$1.00)

Contains for each capital city, estimates of household expenditure (broad groupings) classified by income. Also contains, for all capital cities combined, estimates of household expenditure (broad groupings) classified by household composition, work status and occupation of the household head, age of household head, and estimates for each quarter of 1974-75.

BULLETIN 3 STANDARD ERRORS (Ref. No. 17.21)(80c, \$1.20)

Contains estimates of the sample errors associated with data items in the survey, for use in assessing the reliability of particular survey results.

BULLETIN 4 EXPENDITURE CLASSIFIED BY INCOME OF HOUSEHOLD (Ref. No. 17.22)(\$1.10, \$1.50)

Contains estimates of household expenditure (detailed groupings) classified by income, for each capital city.

BULLETIN 5 QUARTERLY EXPENDITURE PATTERNS (Ref. No. 17.23)(60c, 90c)

Contains estimates of household expenditure for each quarter of 1974-75 for each capital city.

BULLETIN 6 EXPENDITURE CLASSIFIED BY HOUSEHOLD COMPOSITION (Ref. No. 17.24)(90c, \$1.30)

Contains estimates of household expenditure by income and household composition (that is, number of adults and children).

BULLETIN 7 INCOME DISTRIBUTION (Ref. No. 17.25)(\$1.00, \$1.40)

Contains information on the sources of income and distribution of income for households and for persons.

BULLETIN 8 EXPENDITURE CLASSIFIED BY SELECTED HOUSEHOLD CHARACTERISTICS (Ref. No. 17.26)(\$1.10, \$1.50)

Contains expenditure estimates for households with selected characteristics (for example, where the head of household was born overseas; pensioner households).

Further details of the tables included in each of the above publications can be found in Bulletin 1.
